Equipment	\$650															
Discount	\$50															
Labor	\$400															
Total	\$1000															
<input checked="" type="radio"/> Save to Template <input type="radio"/> Clone This Estimate <input type="radio"/> Save This Estimate																
TEMPLATE NAME: IG-200																
PROJECT: 15MSF012																
Save																

Employee can clone current estimate for new project. This does NOT create a new template, it is a singular instance. The employee will be taken to a new estimate page for the project specified.

Initial Session Selector open on page load. On submission, it is closed and is later accessible through the "Add Session" button and is loaded underneath the last session.

Edit number of sessions inline

Session group subtotals for duplicated sessions

In addition to the "Labor" Payload (pretty much used in all cases), there should also be "Creative" and "Technology" payloads that are only loaded if the "Creative Service" checkbox is selected when creating the Project on the Project page.

Potentially move to another story???

Checking the radio button initiates slide down to display new input form for "Template Name"; user is able to save current estimate as new template.
*User can only save as new, can NOT edit by saving over with the same name.

Trying to save using an existing name shows validation error message under form field.

MY DASHBOARD

Dog Profile: Basic dog info, along with quick view on collar vitals.

Quick Log: Calls to action on the most commonly missed activities.

Rover Map: Expandable to full screen, quick action on 'dog locator'.

Recent Activity: Overview of total daily walks with Rover.

FLOW 1.0 - ALARMS/NOTIFICATIONS

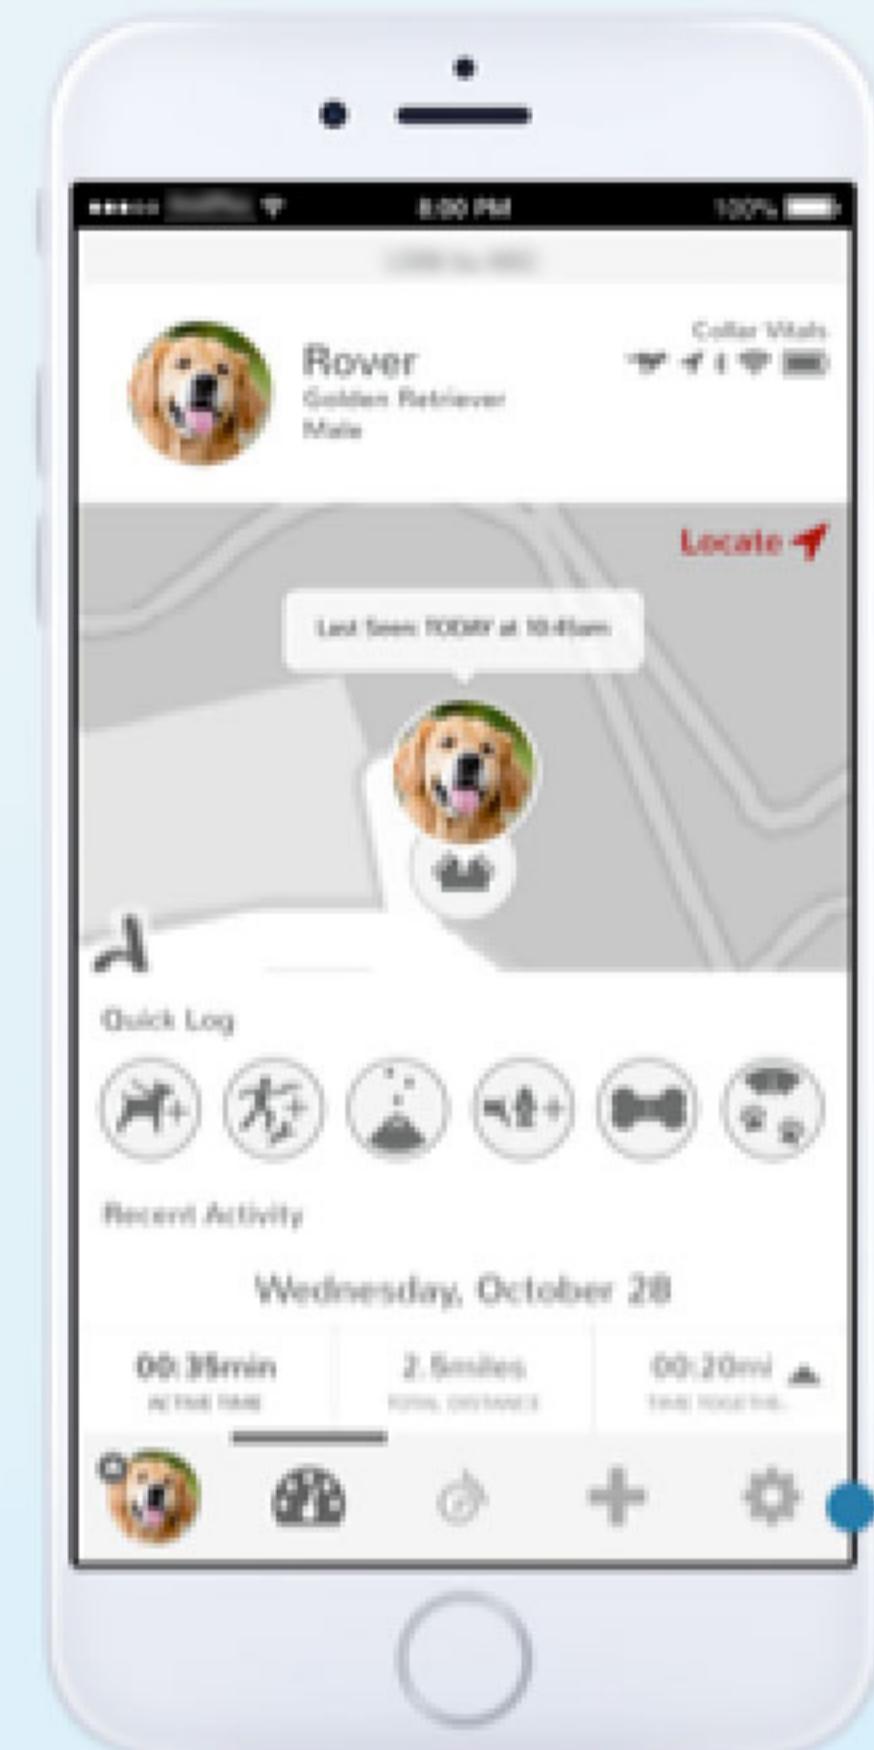

FIG1.01

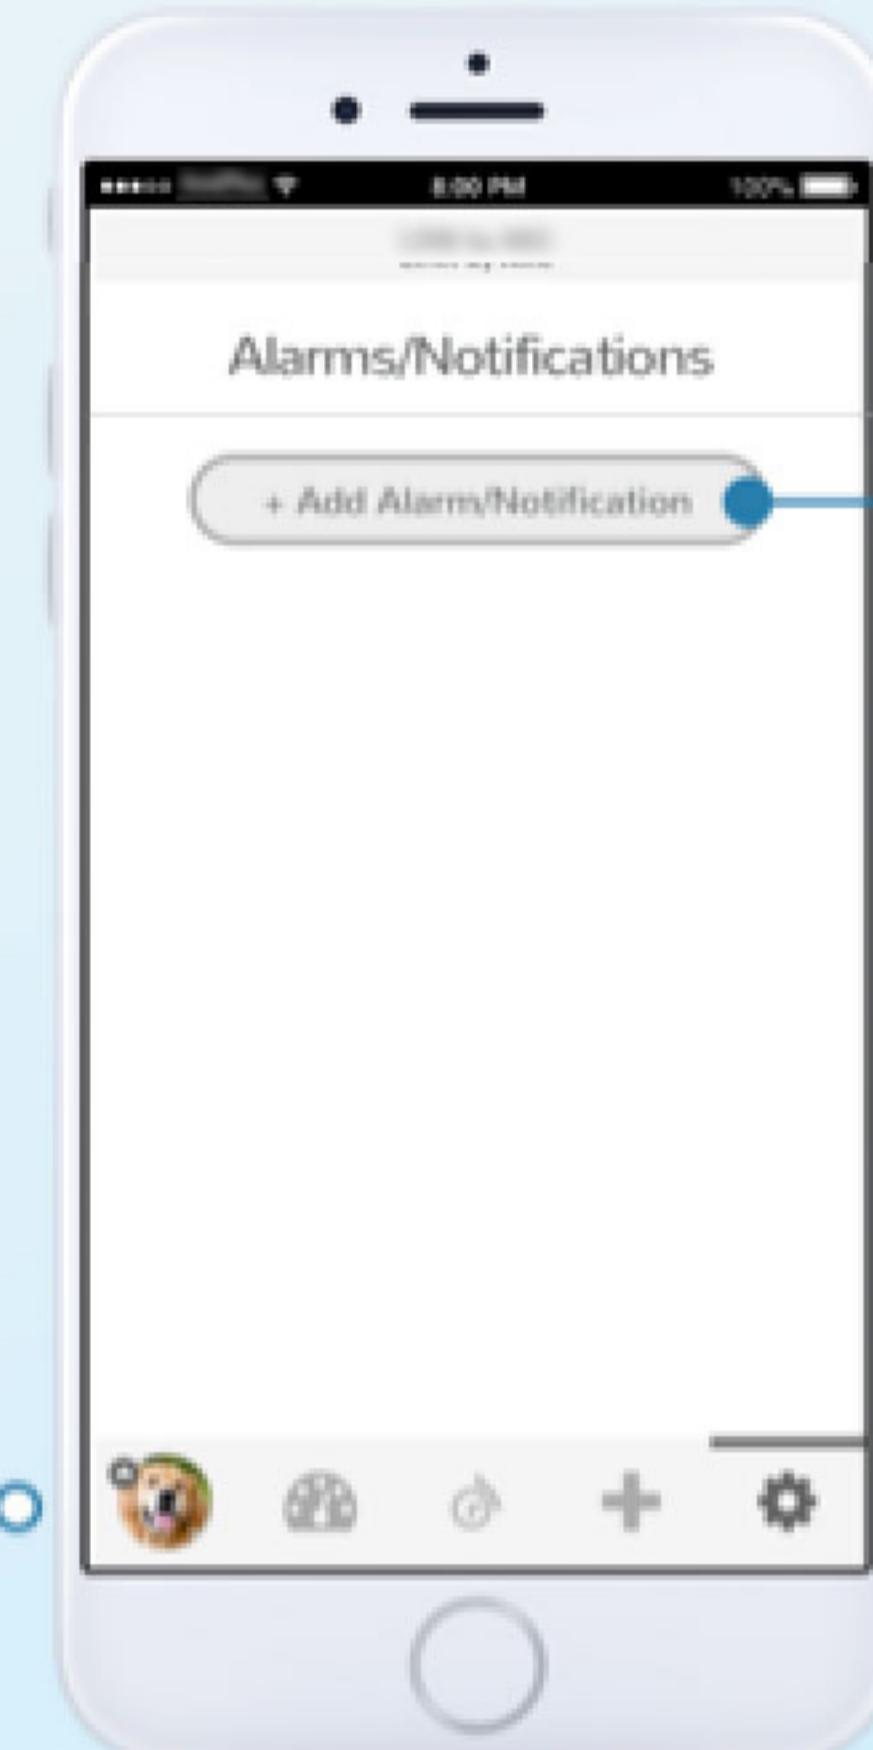

FIG1.02

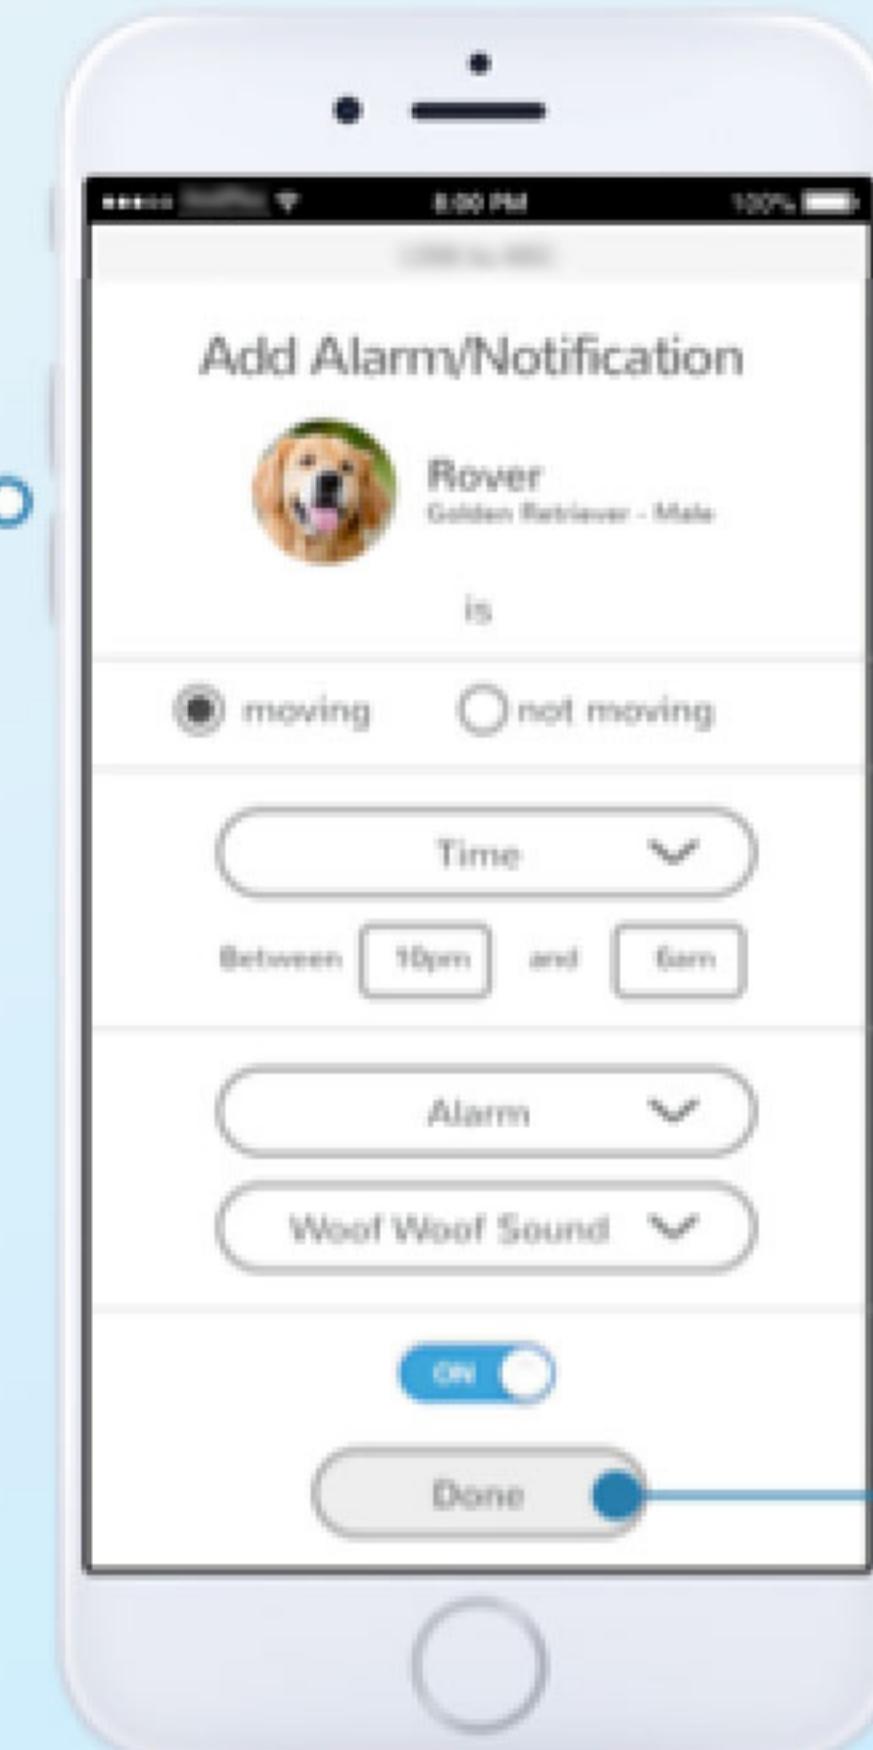

FIG1.03

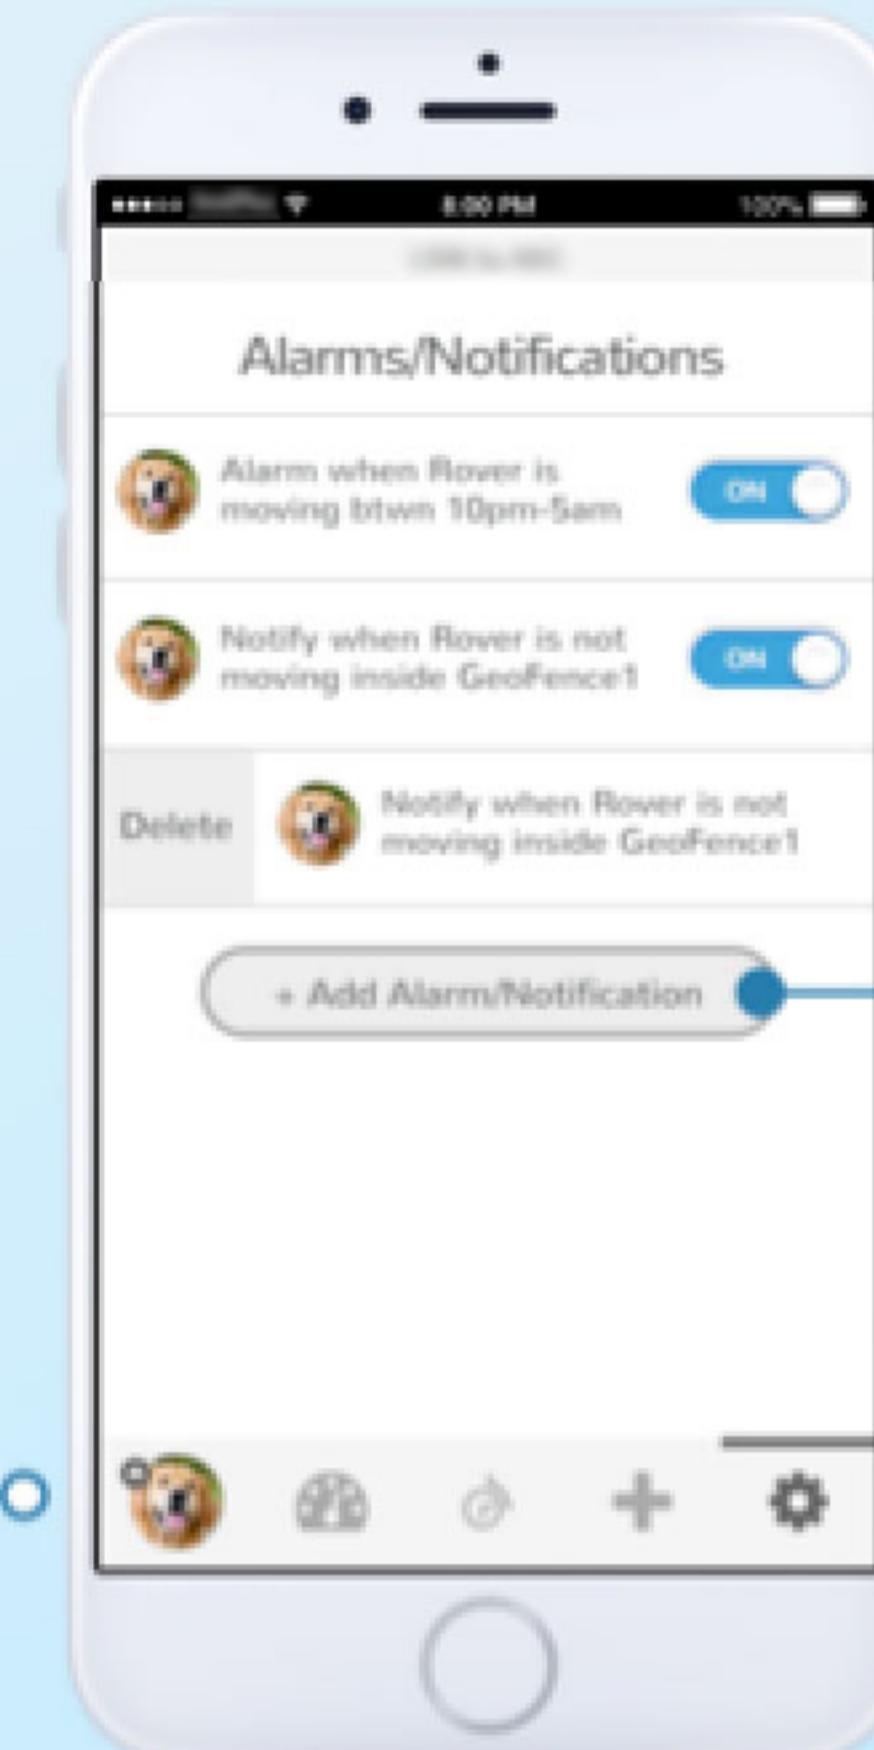

FIG1.04

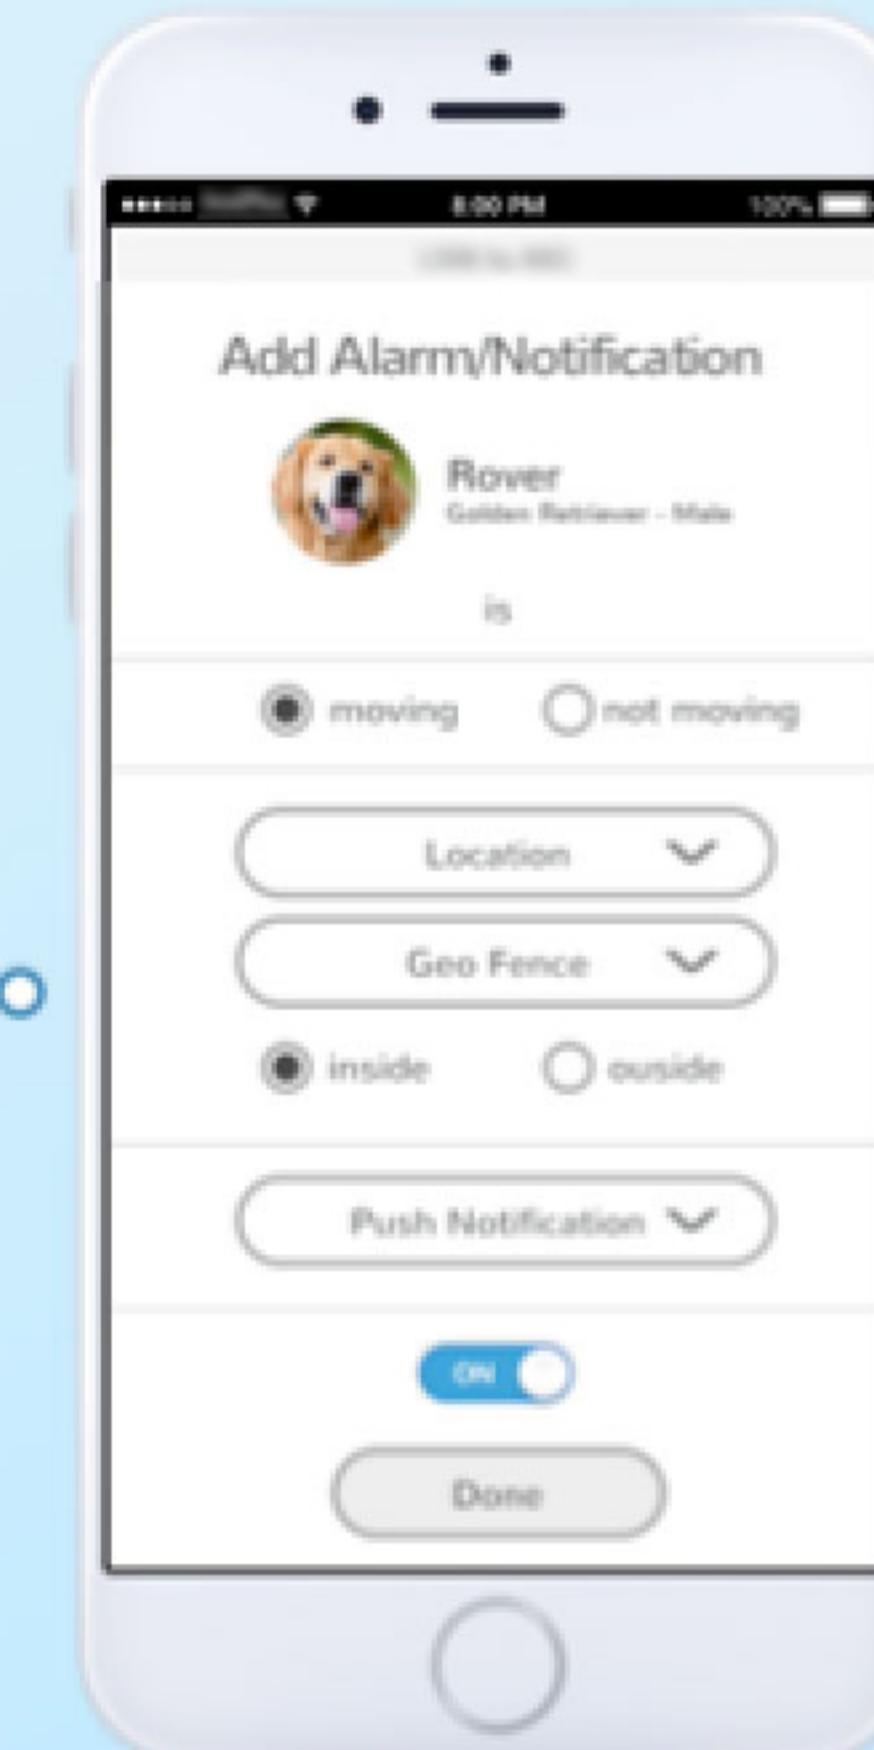

FIG1.05

USER FLOW

Dashboard

Tapping the settings icon brings the user to an Alarms/Notifications section of the app. If additional settings are added, an intermediate settings screen could be added.

Alarms/Notifications

This section allows the user to set powerful alarms or push notifications based on a number of variable inputs. Default alarms could be built into the app but turned off by default.

Add Alarm/Notification

Here the user selects how the app notifies them that the dog is moving or not based on accelerometer and/or BTE and/or GPS data, within a specified time-frame. The idea is that the user may want to know if their dog is awake during the night which might indicate it needs to go out.

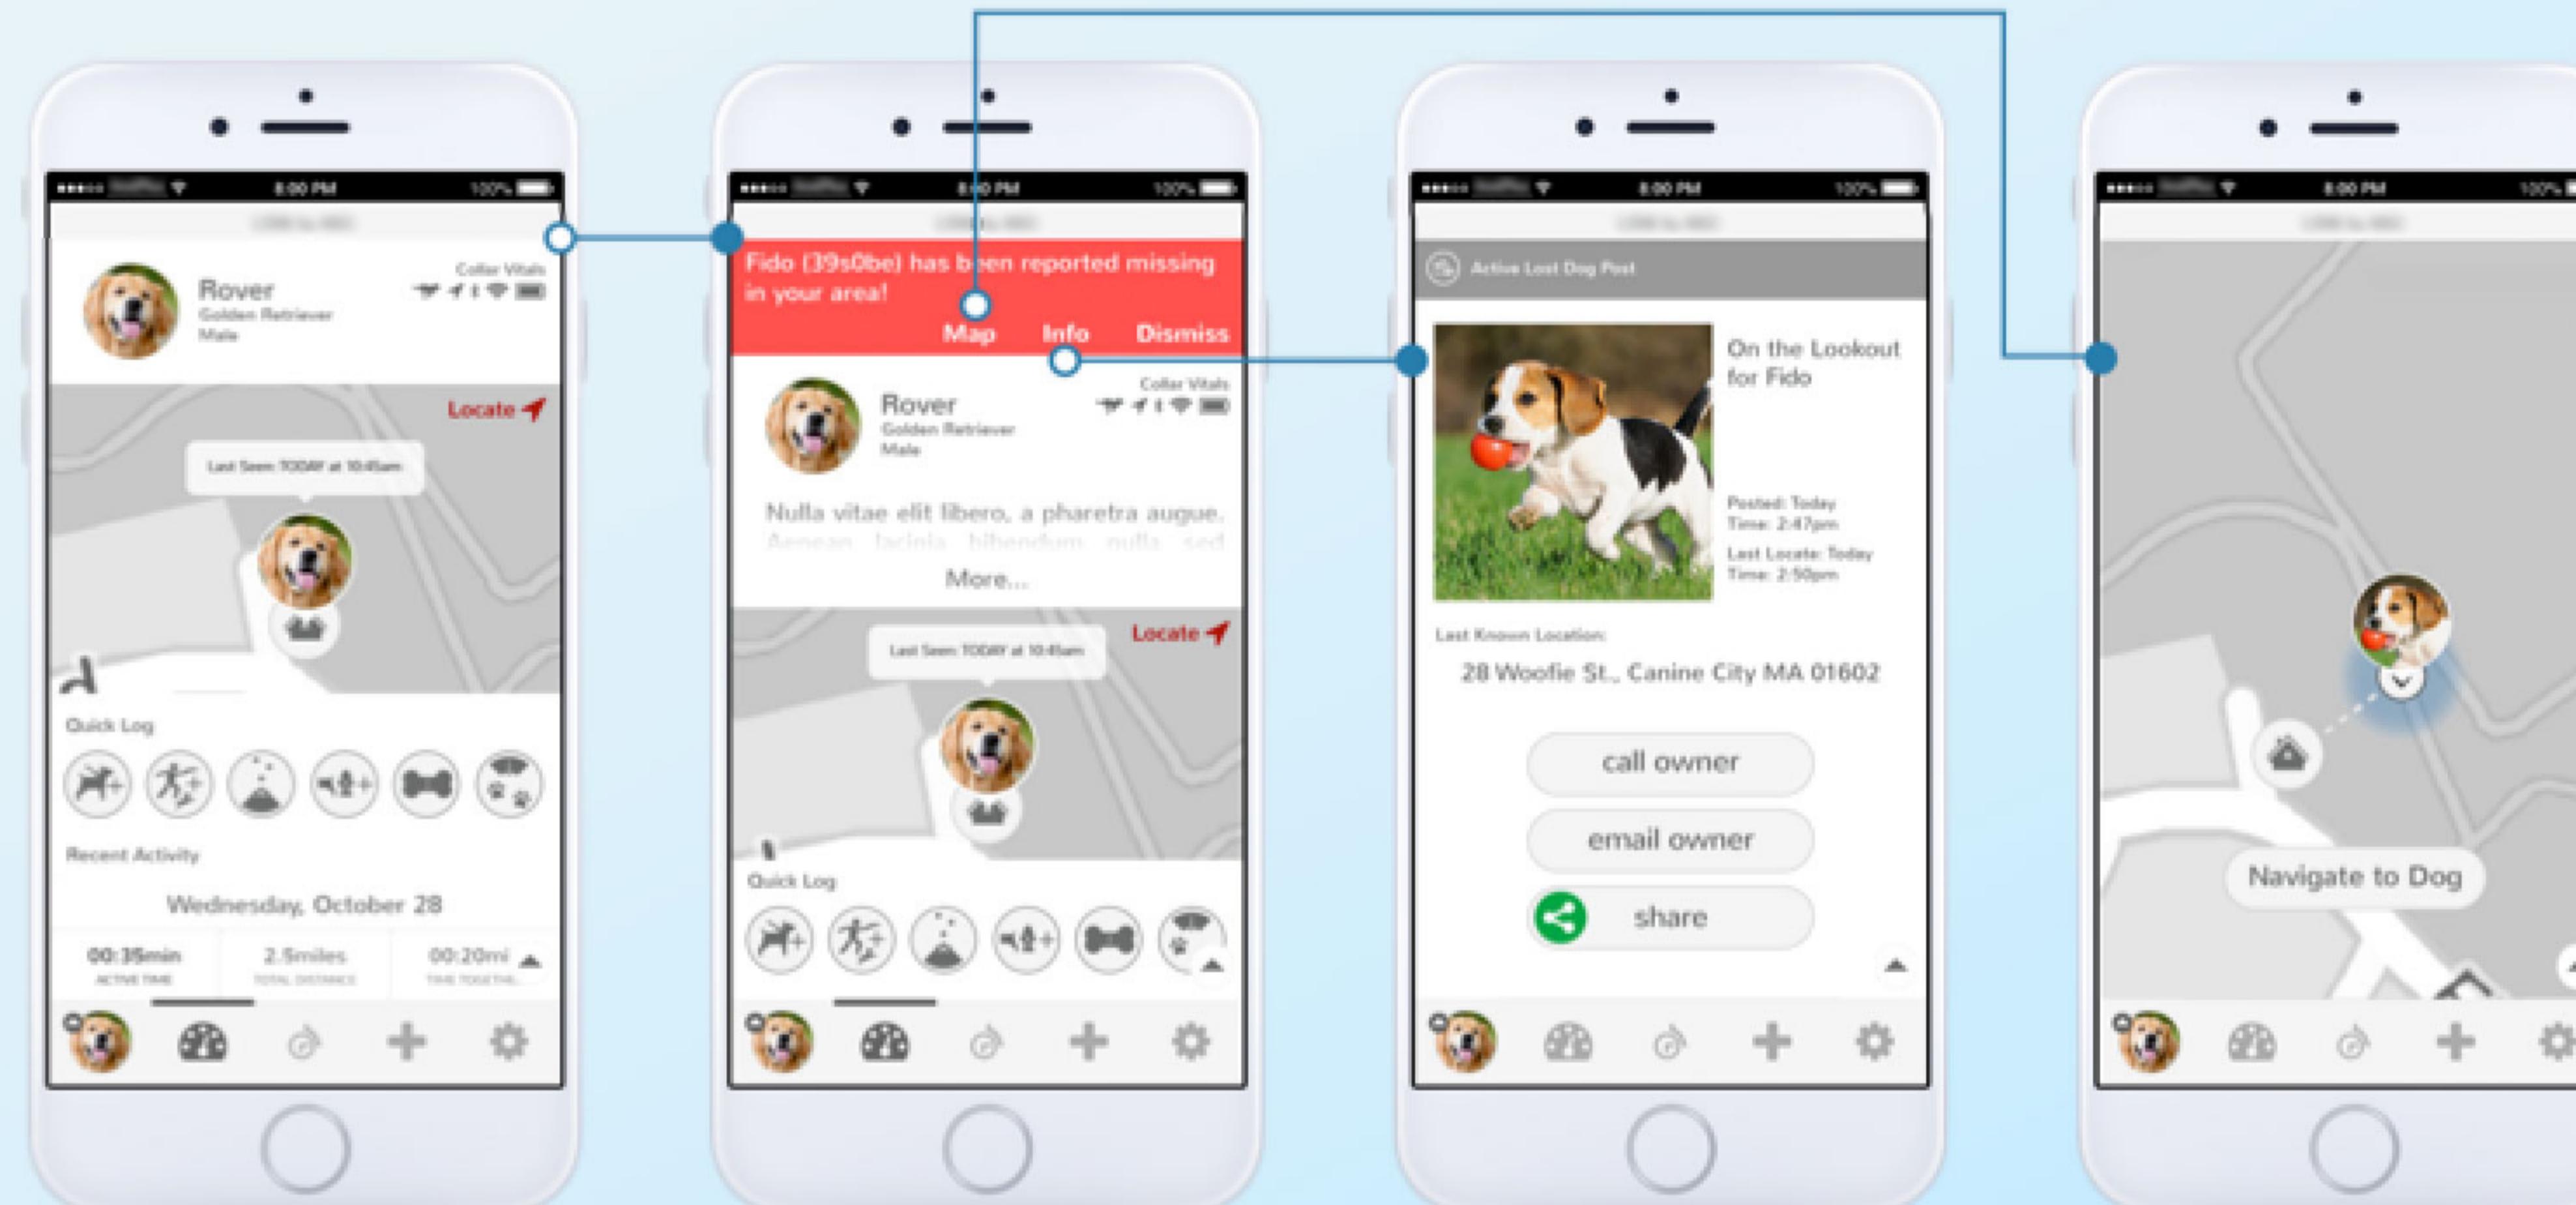

Alarms/Notifications

The list of alarms and notifications have on/off toggles for quick adjustments. User can tap to edit, or swipe and tap delete to delete an alarm/notification.

Add Alarm/Notification

The user may want to set a NO GO ZONE using a Geo Fence and indicating whether they are notified if the dog is moving within that space. The idea here is that the user has a neighbor's yard or some type of space they don't want the dog inside of.

FLOW 2.0 - ROVER ALERT!

USER FLOW

Dashboard

In a standard dashboard view (second icon in the tabbed footer navigation area), the user is able to view core activities and data points which pertain to Rover.

Rover Alert!

If a dog within a relatively close radius to the user is identified as "lost" by their owner, the user will receive a Rover Alert!, letting them know that the lost dog is in the vicinity. The user will be able to pull up a map with the lost dog's location, find out more info on the lost dog, or will be able to dismiss the alert.

Lost Dog Info View

Clicking on the "Info" button, the user will be taken to the lost dog post, containing vital dog info, as well as several calls to action (call the owner, email the owner, and share the post.)

Lost Dog Map View

Alternatively, the user will be able to pull up a map with the lost dog's location, so that they may determine the best route to the dog. Should the user successfully retrieve the dog, they will be able to navigate back to the dog info view, where they'll be able to inform the owner and arrange a meeting.

FLOW 3.0 - MULTIPLE DOGS PER USER

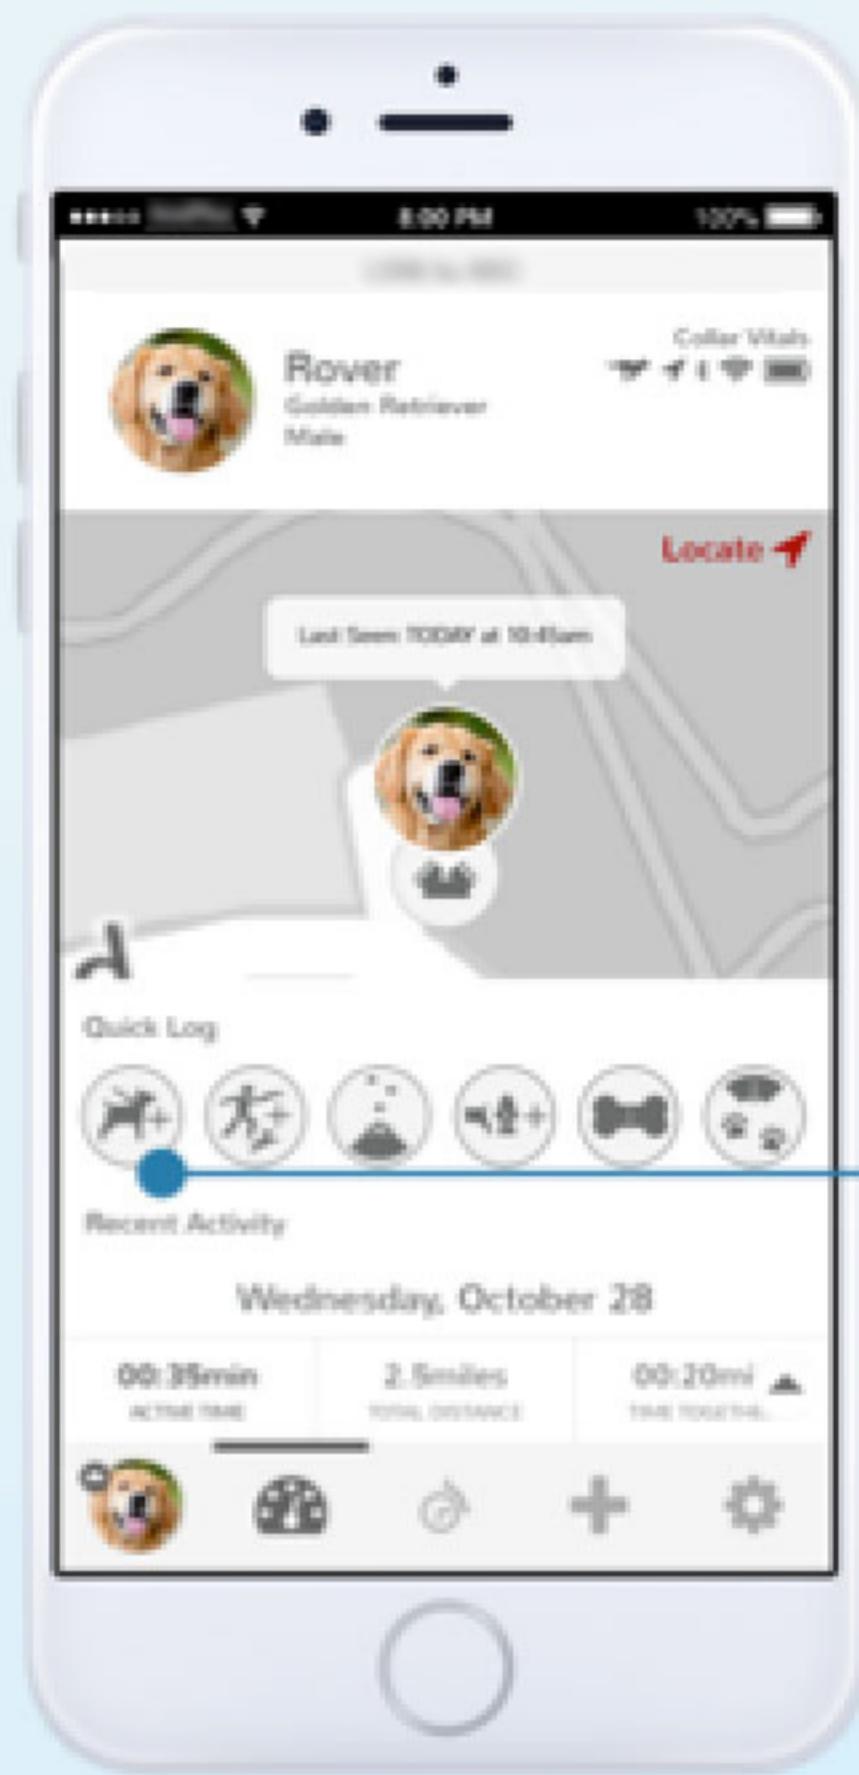

FIG 3.0.1

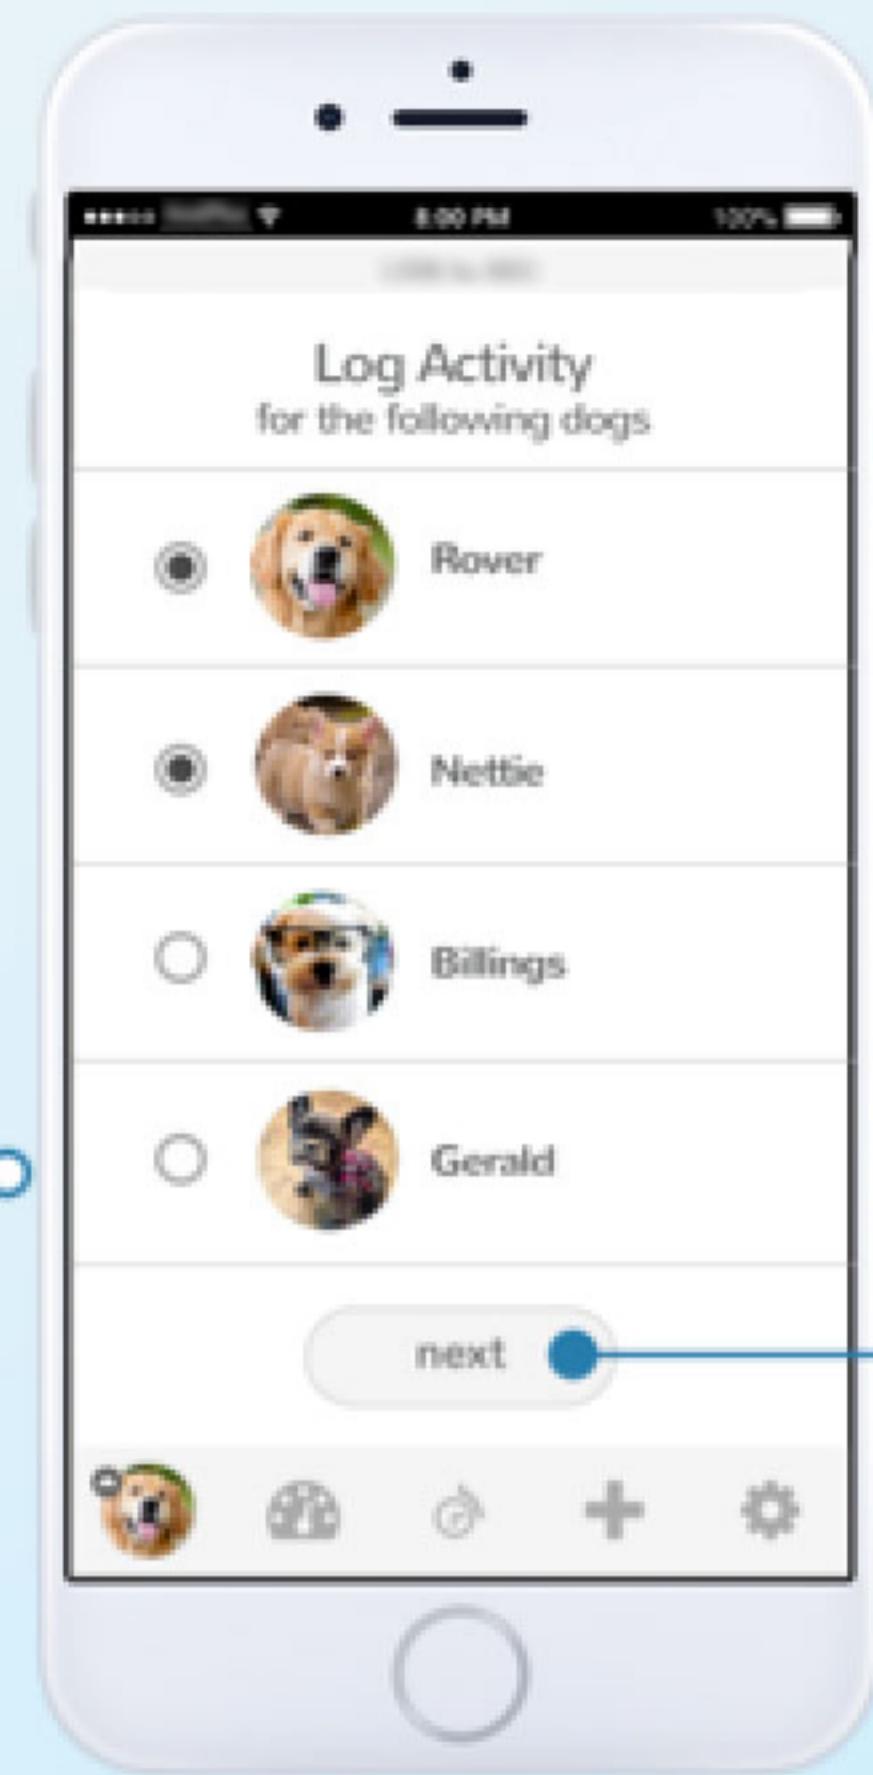

FIG 3.0.2

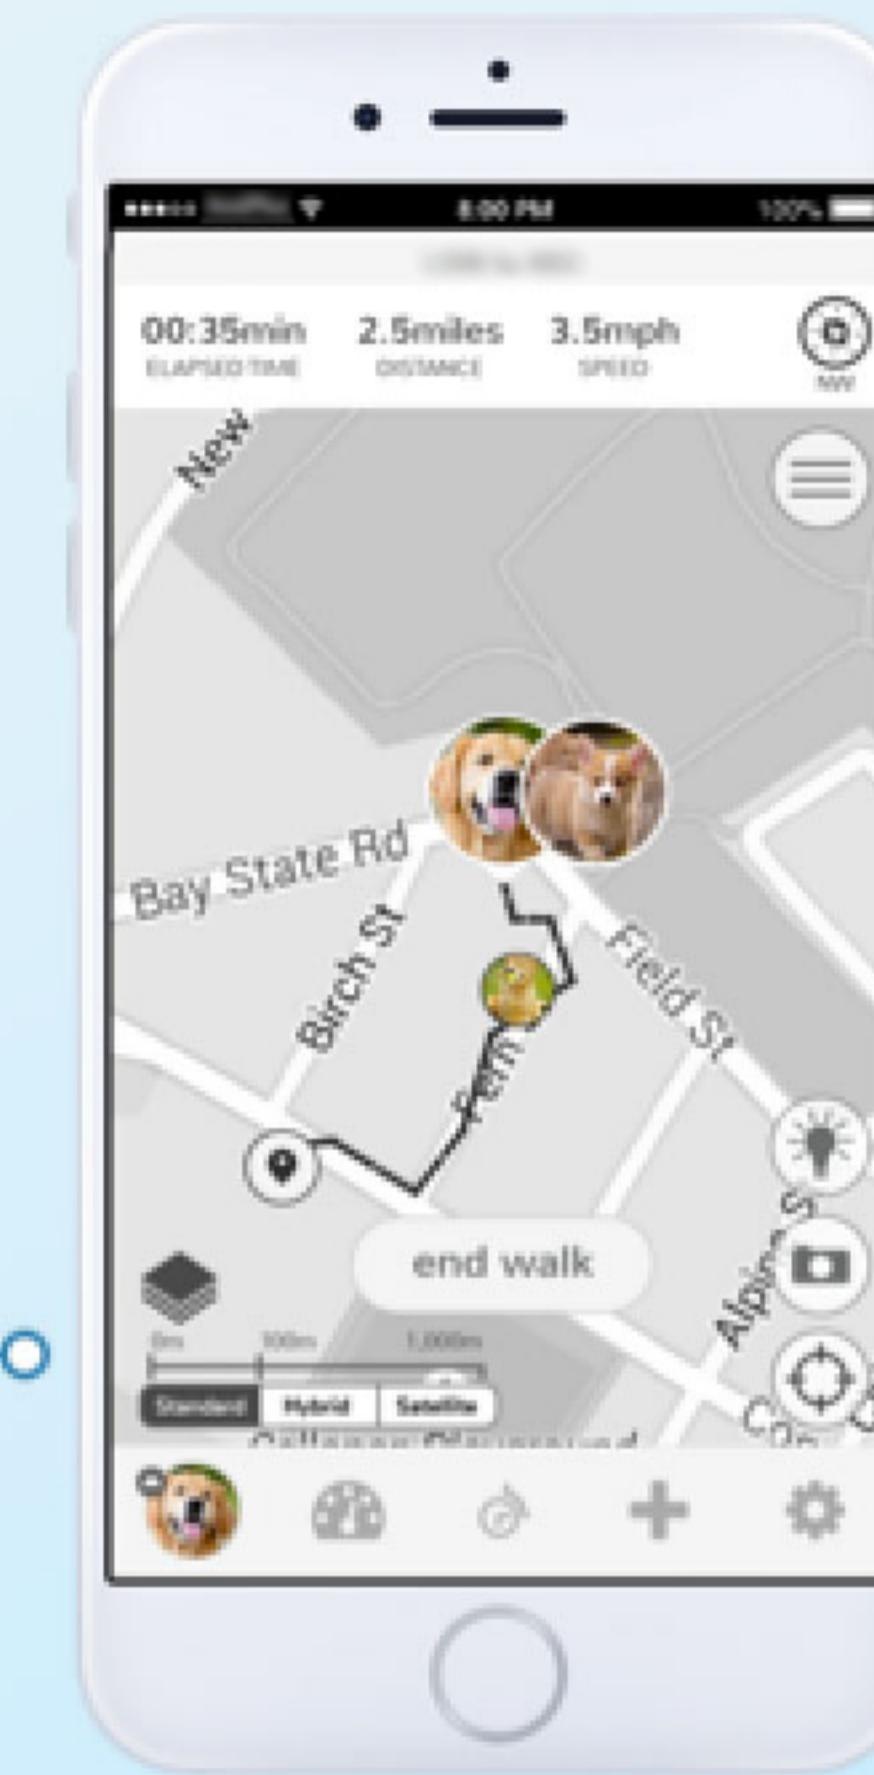

FIG 3.0.3

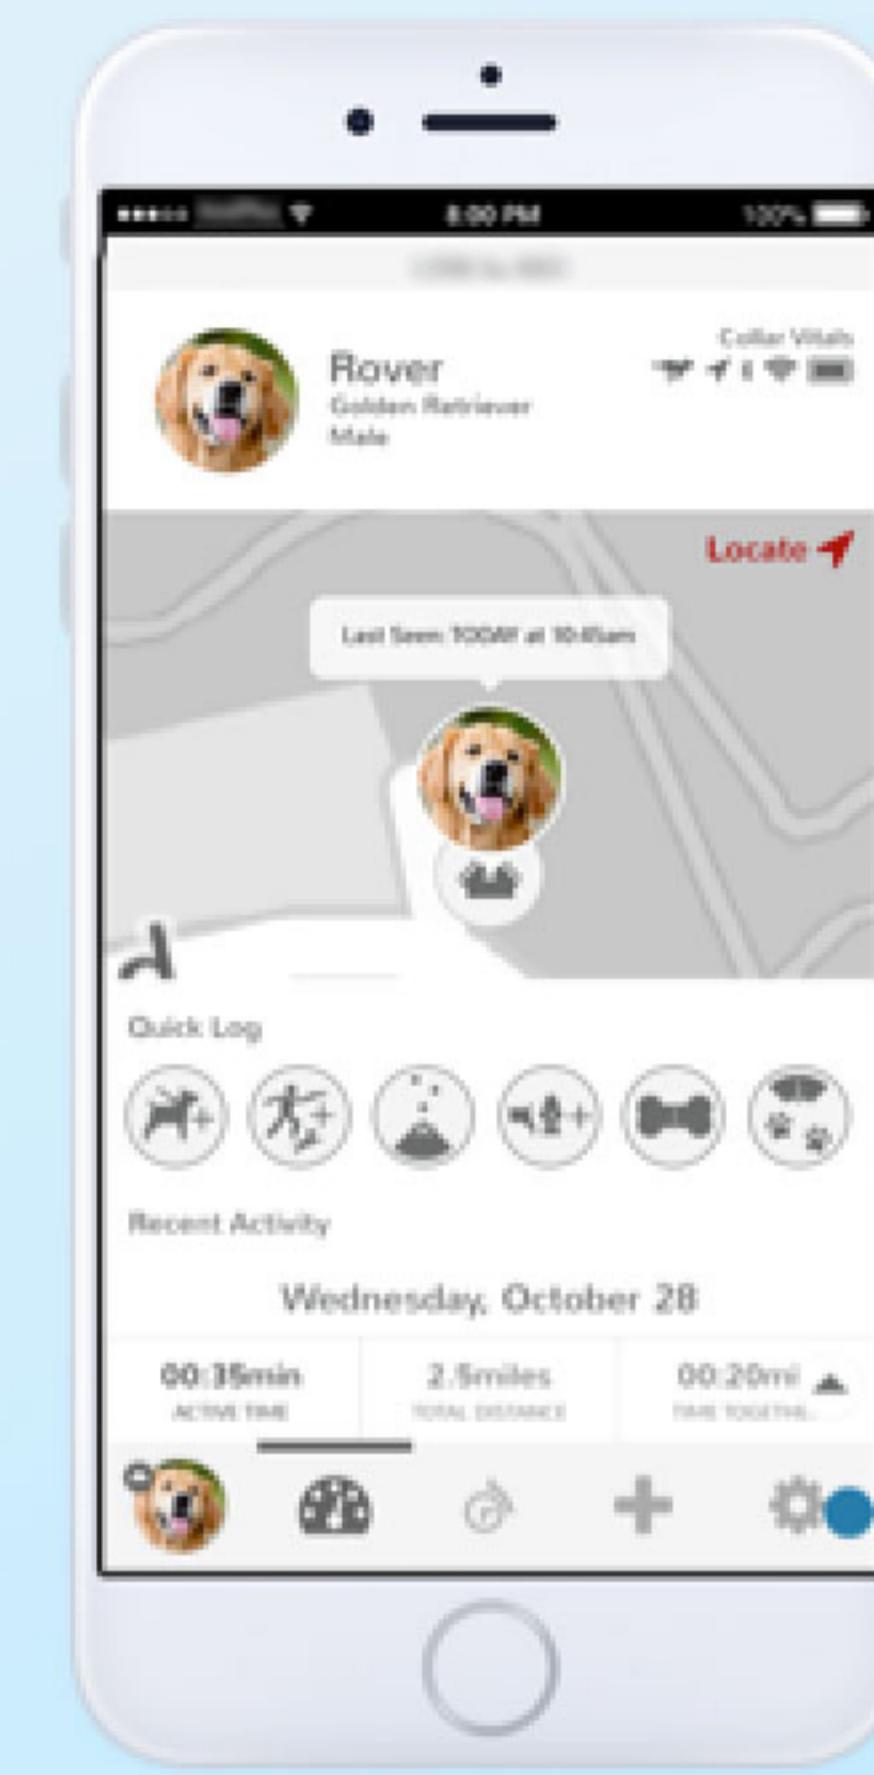

FIG 3.0.4

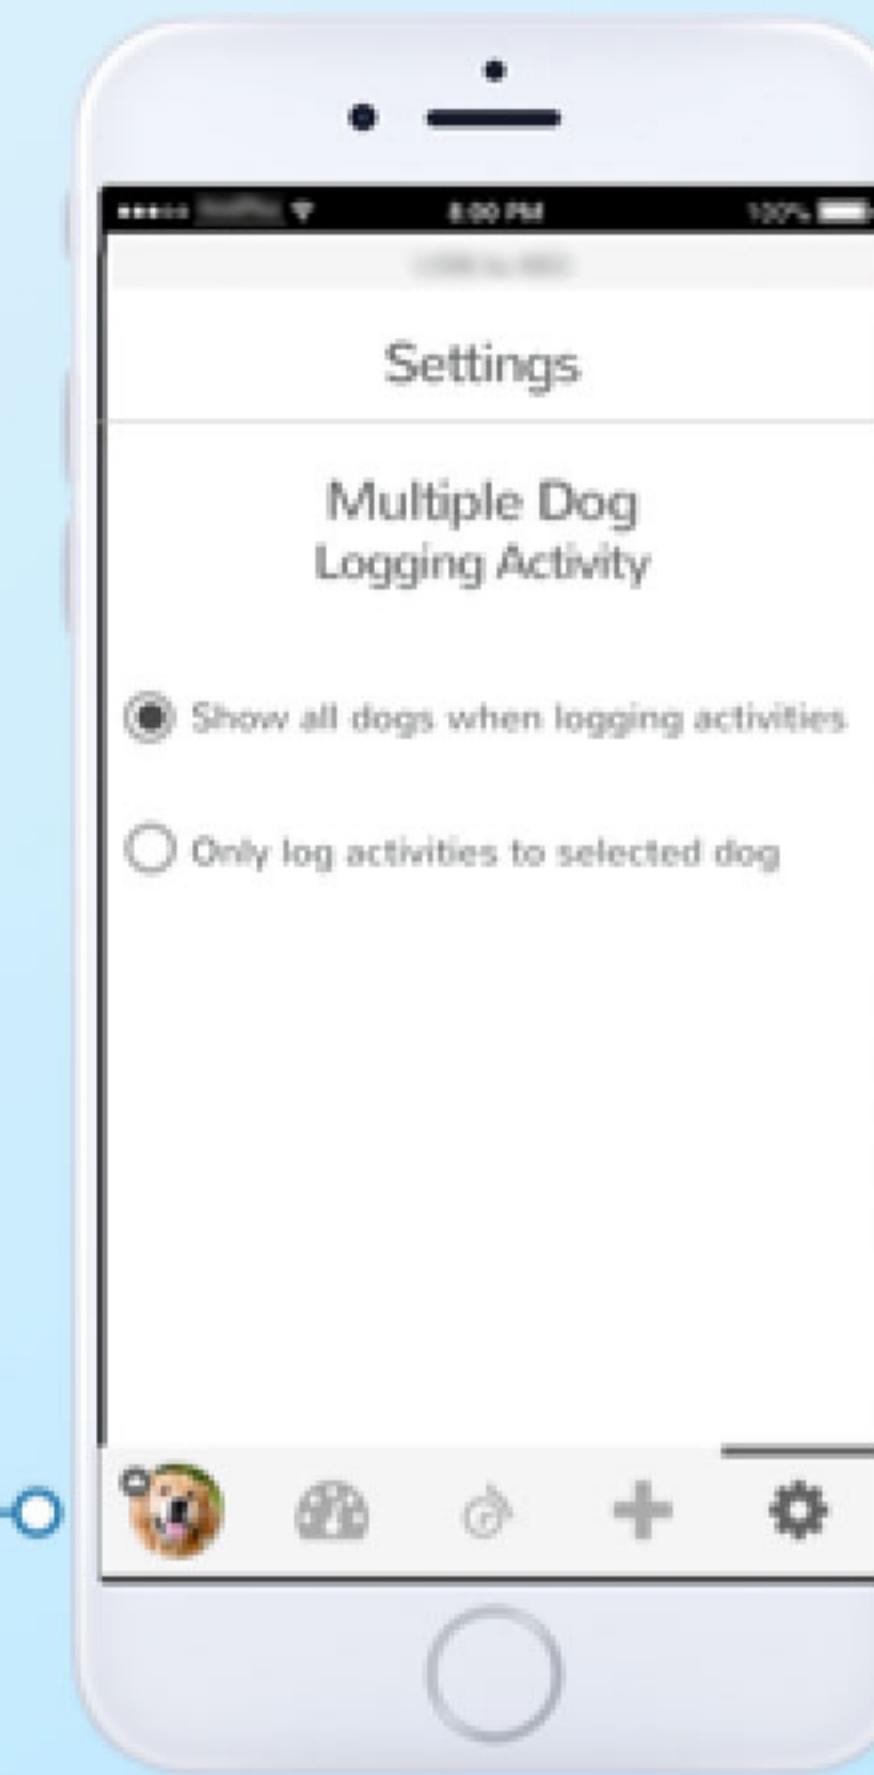

FIG 3.0.5

USER FLOW

Dashboard - Quick Log

Tapping the start a walk icon in the quick log section of the dashboard gets a user directly into the activity.

Log for following dogs

Here the user selects which dogs this activity will be logged for. Rover is still the main dog selected on the dashboard, but switching to Nettie as the main selected dog would show the activity logged on this walk.

Logging Walk

During the activity multiple dogs will be generating data. For a walk, both selected dogs show up on the map. When the walk ends, data will be associated with each dog.

Dashboard

Tapping the settings icon brings the user to a Settings - Multiple Dog Logging Activity section of the app. If additional settings are added, an intermediate settings screen could be present.

Settings - Multi Dog

To customize the experience, users could choose whether to be asked by the app after starting an activity which dogs get logged. This way if a user finds the flow cumbersome, they can start an activity more quickly.
